Avira AntiVir MailGate Suite

Anti-virus plus anti-spam protection for your email communications under Unix

It is not just viruses that can come by email, but also a flood of spam, which can be costly for you to deal with. Avira MailGate Suite therefore has an anti-spam function in addition to Avira virus protection.

Uncompromising protection

- Examination of all incoming and outgoing or internally sent emails in real-time
- Recursive scanning of all email attachments, even in compressed form (archives)
- Automatic movement of unknown archive formats and infected or suspect files to quarantine
- Support for all current Linux distributors and MTAs, such as Postfix, Exim and Sendmail
- Effective protection against spam attacks and early warning against outbreaks

Fast updates

- Extremely small, bandwidth saving updates for virus definitions through incremental VDF updates
- Fast, comprehensive protection through updates without interrupting the system

Efficient configuration and management

- Individual system adaptation to company specifications
- Central configuration, monitoring and control of the system
- Additional email address filter
- Detailed protocol, statistics and report functions
- Statistical information about scanning activities by MailGate/MailGate Suite can be saved in a database and are available for reporting

System requirements

The following platforms are supported:	• Debian GNU/Linux 4 • Debian GNU/Linux 5 (stable, lenny) • Novell Linux Desktop 9 (NLD 9) • Novell Open Enterprise Server 10.2 • Novell SUSE Linux Enterprise Server 9 (SLES 9) • Novell SUSE Linux Enterprise Server 10-10.2 (SLES 10) • Novell SUSE Linux Enterprise Server 11 (SLES 11) • Red Hat Enterprise Linux 4 and 5 Server • Sun Solaris 10 (SPARC) • Ubuntu Server Edition 8 and 9 (intrepid)
RAM:	• 256 MB free main memory(1280 MB for Solaris)
HDD:	• 100 MB free hard disk space (1 GB or more recommended)

For the installation of the AVGuard under Unix the external kernel module Dazuko 3.0 is required.
